

Why using an e-learning platform ?

Analytical chemistry is an increasingly evolving scientific field and needed in each discipline. However, several techniques and methods often hardly can be practiced directly on the analytical systems.

Thus we provide clearly structured theoretical and practical content about methods like GC, HPLC, SPE, and mass spectrometry as well as simulators for practicing.

No matter if you are an apprentice, a pupil, a student, a teacher, a scientist or another interested person, you can use this website anytime for free!

Learn -> Practice -> Apply

Content

- Lessons on basic chemistry, sample prep, chromatography, mass spectrometry, bio-analytical methods and others
- External content such as video tutorials, handbooks or slide shows
- GC, HPLC and SPE simulators to apply what you 'know' and what you 'plan'
- Glossary with brief summaries and graphics
- "Test your knowledge" and make quizzes
